

Leaf improvements, suggestions, questions

Most Important:

- Dim dash lights when headlights are not on (provide some visual signal).
- Timer auto bypass if plugged in away from home charger. Immediately charge at a public charger regardless of timer setting.
- Send email/text when my car has less than 50% battery charge, in case I forget to plug in at home
- Front pillars trim/angled for better view of front
- GPS (reverse display) next turn should be at top
- One master database (on dash) of public charging stations, regardless of company: ChargePoint, Blink, Nissan.
- Estimate mileage range based on town, freeway or mtn driving
- Blue charge lights need day/night mode; dash charge lights are too bright at night
- Passenger bypass for navigation setting while car is moving

Lesser Importance:

- A bit more storage near driver
- Have one-click accessory mode available (like keyed ignition cars) for radio listening while car is off.
- Dimmer rear-view mirror
- Memory driver seat position and mirrors
- Forward/back seat adjust full width bar, rather than inside small lever only
- Bike rack mount needed, light-weight small square tube support
- Noise is too quite, almost stealth like, have optional louder sound avail for slow speeds
- Raise review mirror
- Larger water bottle holder
- Sync dash and nav clocks.
- Correct temperature reading on dash
